Tanvir Ahmed Khan

Dhaka, Bangladesh • tanvirahmedkhan74@gmail.com

Research Portfolio • Google Scholar • GitHub • ORCID

Education

North South University Dhaka, Bangladesh
Bachelor of Science in Computer Science and Engineering 2021 – 2025

- **CGPA: 3.80/4.00** | *Summa Cum Laude*
- Relevant Coursework: Machine Learning, Pattern Recognition, Numerical Methods, Probability and Statistics, Introduction to Linear Algebra, Design and Analysis of Algorithms

Research Interests

Multimodal learning; retrieval, memory, and evidence-aware reasoning; video understanding; 3D vision and neural rendering; audio-driven facial animation; low-resource natural language processing.

Ongoing Research

ERL — Evidence Loss in Multi-Hop QA 2026 – Present

Ongoing controlled analysis of evidence access, selection, and reading in multi-hop question answering. Further experiments and evaluation are in progress; manuscript in preparation. Research overview

RIFT — Recoverability-Gated Implicit Facial Dynamics Sep 2026 – Present

Exploratory study of speech-predictable motion and rendered articulation. Following a negative predictive pilot, the current RIFT-M focus is measurement reliability. Research overview

RSI — Capacity Growth in Verified Self-Improvement Oct 2026 – Present

Investigating model expansion during verified self-training. Current work establishes reliable training data and experiment recovery; the growth hypothesis remains untested. Research overview

Research Experience

Machine Intelligence Lab (MILab) | North South University — Mar 2025 – Present

- **Research Assistant**. Advisors: Dr. Nabeel Mohammed and Dr. Shafin Rahman.
- Contribute to research in multimodal learning, low-resource NLP, and speech-driven visual systems, including the publications listed above.
- Developed distributed multi-GPU inference and chunked execution for collaborative talking-avatar systems; investigated Audio2Face–Three.js integration and ARKit blend-shape recovery.
- Contributed to synchronized streaming, renderer distillation, TensorRT validation, and Jetson profiling using external speech and rendering models; portions of the work are closed source.
- Profiling identified upstream speech generation as the bottleneck after renderer acceleration; end-to-end real-time operation was not established. Archived a separate 3D Gaussian method hypothesis after its registered residual-association gate failed.

Selected Research and Engineering Projects

PNEUMA — Video Memory for Long-Form Question Answering — Discontinued thesis work

Discontinued undergraduate thesis research from a four-person team, integrating frozen perception models with SQL, vector, and temporal-graph memory. An evaluation audit exposed unresolved grounding and correctness limitations. Research dossier

Saliency Detection via Knowledge Distillation — Aug 2024 – Dec 2024

Knowledge-distillation prototype using a Peekaboo/DINO teacher and UKAN student with mask-supervised and teacher–student objectives. GitHub

DynApex: Dynamic CPU/GPU Parallelization — Aug 2024 – Dec 2024

C++ prototype for dependency and cycle analysis, pragma injection, and OpenMP-based CPU and target execution. GitHub

Industry Experience

Tuctuc | Spain (Remote) — Jan 2022 – Jun 2026

- **Junior Software Engineer**. Maintained and extended Odoo-based ERP systems and developed cross-platform mobile applications using React Native.

Technical Skills

Machine Learning: PyTorch, Hugging Face Transformers, Knowledge Distillation, Multimodal Fusion

Vision & Avatar Systems: 3D Gaussian Splatting, FLAME/3DMM, NVIDIA Audio2Face, ARKit Blend Shapes

Retrieval & Memory: Retrieval-Augmented Generation, FAISS, SQL, Temporal Graphs, Sentiment Analysis

Systems & Deployment: Multi-GPU Inference, TensorRT, Docker, Linux, NVIDIA Jetson AGX Orin, FastAPI, Git

Programming: Python, C++, JavaScript, React Native

Languages: Bangla (Native), English (C1)

Awards & Honors

Academic Scholarship, North South University — 2023

Participant, ICPC Asia Dhaka Preliminary Contest — 2021
